	The Yes campaign are deploying a series of arguments about Scotland's economic strength as an independent country. For example, they point to figures showing that Scotland would be the 14th wealthiest country in terms of economic output per head among the world's developed economies, compared to the UK's 18th place. If the Yes campaign could persuade you that you and your family would be economically better off with Scottish independence, in these circumstances, how likely or unlikely would you be to vote Yes for an independent Scotland in September? The Better Together campaign, which is seeking a No vote in the referendum, has been criticised for pursuing a negative campaign - including claims that Scotland would not be able to watch Dr Who, would be ejected from the European Union, would lose the pandas from Edinburgh Zoo, and would not be able to share the pound. Would you like to see Better Together outline a more positive case for the United Kingdom? One of the main issues discussed in the referendum debate is whether or not an independent Scotland would be a fairer society, where wealth and economic opportunity are more evenly distributed. Do you think an independent Scotland would result in a fairer society than is the case under the Westminster system?
